The 3M difference.

There are thousands of window film dealers in the country, but only a select few have been chosen to be part of the 3M network. 3M™ Authorized Dealer Installers are available to help you select the right window film for your vehicle. Whether you want to reduce heat and glare or increase privacy and security, there's a 3M™ Window Film to meet your needs.

Invented, innovated and improved.

Improving comfort, protecting vehicle interiors and blocking UV rays are hallmarks of 3M™ Automotive Window Films. 3M was issued the first sun control window film patent in 1966, and our innovative window film products have helped provide protection from the sun's harmful rays for 50 years. Put the innovation of 3M to work for you.

3M[™] Automotive Window Film FX HP Series

Performs as good as it looks.

High performance meets high style.

3M™ Automotive Window Film FX HP Series offers outstanding heat rejection performance with a sleek charcoal finish.

3M™ Automotive Window Film FX HP Series

Stay cool

The FX HP Series offers maximum heat rejection and protection from the sun's ultraviolet (UV) rays. Rejection of up to 55% of the total solar energy coming through your windows gives your car the cool factor in more ways than one.

Superior UV protection

Blocking up to 99% of UV light, the FX HP Series provides a total Sun Protection Factor (SPF) of up to 1000. This helps provide vehicle occupants with significant protection from harmful UV rays.

Increase privacy

Increase privacy for you and your valuables with the FX HP Series, available in tint levels that can block up to 95% of visible light into your vehicle.

Reduce glare

The FX HP Series significantly reduces glare from sunlight, allowing you to see better and concentrate more on driving. It's available in a range of tint levels to meet your needs.

Terms to know

► Total Solar Energy Rejected (TSER)

The percentage of total solar energy rejected by filmed glass. The higher this value, the less solar heat is transmitted.

Visible Light Transmitted

The percentage of visible light that passes directly through filmed glass: the higher the number, the lighter the film.

Visible Light Reflection

The percentage of visible light reflected back from the glass.

▶ UV Rejection

The percentage of harmful ultraviolet light that is rejected by filmed glass. Ultraviolet light contributes to sunburn and other harmful skin conditions and to the fading and deterioration of fabrics and leather.

► Glare Reduction

The percentage by which visible light is reduced by the addition of film.

Choose your level of protection

The FX HP Series is available in a variety of tint levels to meet your needs.
